

Acron Aviation and Flight Data Technologies Join Forces to Deliver an Innovative Vision for Flight Data Management

New solution unlocks safety, efficiency, and lower operating costs for air operators worldwide, from business jets to widebody aircraft

St Petersburg, Fla., – September 16, 2025 – Acron Aviation (formerly L3Harris Commercial Aviation Solutions) and [Flight Data Technologies Inc.](#) (FDT) have signed a strategic agreement under which Acron Aviation will integrate FDT's high-speed wireless Quick Access Recorder (uQAR) into its product portfolio. This collaboration provides air operators with a seamless, end-to-end solution that enables direct access to processed flight data immediately after landing.

The integrated solution captures flight data, automatically transmits it upon landing, and processes it dynamically. As a result, flight safety teams, pilots, and maintenance crews gain near-instant access to actionable insights. **The synergy between these two products opens new horizons for flight safety and operational efficiency.**

"The exceptional performance and low operating cost of FDT's high-speed uQAR allow airlines to significantly improve their flight data management—from recording to processing—while enhancing safety and reducing operational expenses"

Natalia Bacearnicova, CEO of Flight Data Technologies

*"This partnership delivers a new benchmark for enhancing operational efficiency without compromising safety. The ability to automatically capture, transmit, and process flight data within minutes of landing allows operators to streamline maintenance, optimize fuel utilization, and reduce operational costs, all while maintaining the highest safety standards."***Mitesh Patel, SVP & GM, Acron Aviation**

"By seamlessly integrating the uQAR technology with Acron Aviation's flight data intelligence platform, operators can process nearly 100% of their flights within minutes of arrival, from anywhere in the world."

JN Ruby, VP of Flight Data Technologies

About Acron Aviation

Acron Aviation is strategically aligned to deliver world-leading commercial aviation solutions designed to serve aircraft operators and airframe manufacturers across the globe. Our expertise extends to multiple facets of commercial aviation from OEM certified avionics to state-of-the-art simulation devices, best-in-class pilot training and market-leading flight data analytics. With a global footprint, we are uniquely positioned to deliver comprehensive, cutting-edge solutions that enhance our customers operations and further our mission of innovating to create safer skies. About Flight Data Technologies (FDT)

Flight Data Technologies, based in Montreal, Canada, is an avionics manufacturer specializing in universal Wireless Quick Access Recorders (uQAR) and advanced flight data analysis solutions. Airlines around the globe rely on FDT technology to improve operational efficiency, enhance safety, and lower maintenance costs. For more information visit [FDT.link](https://www.fdt.ca)
